# MISSION STATEMENT

## **A General Statement of the Aims of the Lindsey Marsh Drainage Board**

To provide land drainage, flood protection and water management services to the community and the environment of the Lindsey Marsh Drainage District to at least the standards recommended by the Department for Environment, Food and Rural Affairs at a cost that ensures best value for all.

## **POLICY STATEMENT**

Please see attached policy statement.

## **OBJECTIVES**

1. To provide and maintain standards of sound needs based sustainable flood protection of:
  - (a) 1 in 75 years for urban areas, and
  - (b) 1 in 10 years for agricultural areas.
2. To conserve and enhance the environment wherever practical and possible to ensure there is no net loss of biodiversity.
3. To provide a 24 hour/365 day emergency response for the community.
4. To initiate, prepare and monitor water level management plans for all environmentally sensitive areas that could benefit.
5. To provide a working environment for staff that is empowering, fulfilling and safe.
6. To maintain financial records that are correct and comply with all recommended accounting practice.
7. To ensure that all actions taken by the Board comply with all current U.K. and E.U. legislation.

## **HOW DO WE ACHIEVE THESE OBJECTIVES?**

Through the use of

1. Drains and Pumping Stations by:
  - 1:1 Completing the works as prescribed in the five year rolling capital works programme which is reviewed and approved annually by the Board,
  - 1:2 monitoring, refurbishing and renewing all pumping stations and equipment in accordance with the Board's 2025 strategy, which is reviewed annually,
  - 1:3 ensuring that all Board maintained watercourses are roded during the period mid July to 31st October, priority being given to watercourses serving urban or environmentally important areas.

- 1:4 surveying all watercourses for environmental, archeological and heritage features before any works are undertaken,
- 1:5 maintaining records of all Board watercourses and pumping stations detailing all pertinent aspects,
- 1:6 maintaining and developing facilities for the remote monitoring and control of all water management assets using telemetry,
- 1:7 ensuring that water level management plans are initiated, prepared, agreed, operated and regularly monitored,
- 1:8 operating all the plant and machinery of the Board in the most effective and efficient manner,

and

2. Support Services by:

- 2:1 Processing and monitoring all byelaw applications and contraventions according to the Board's policy, within the timescale permitted ensuring that clear information is returned to the applicant,
- 2:2 processing all Byelaw and Section 23 applications within the prescribed timescale and ensuring that clear information is returned to the applicant,
- 2:3 ensuring that all relevant planning applications are reviewed and where appropriate, comments forwarded to the planning authority and applicant to include identification of any development charges and collection,
- 2:4 collecting promptly all monies due to the Board,
- 2:5 preparing all financial and management accounting information accurately and to the Board's agreed timescales,
- 2:6 paying all invoices promptly within 30 days,
- 2:7 supplying all information required by the Board accurately and on time,
- 2:8 maintaining the geographical information system (G.I.S.) such that all new information is entered within 30 days of receipt by developing the system to include all aspects of the Board's works,
- 2:9 providing a 24 hour/365 day a year emergency response service,
- 2:10 purchasing the correct equipment at the best price to ensure that all staff can undertake the necessary works jobs effectively and efficiently, and
- 2:11 ensuring that all training requirements are met through an agreed training programme for each member of staff.

# POLICY STATEMENT ON FLOOD PROTECTION AND WATER LEVEL MANAGEMENT

## 1. INTRODUCTION

### Purpose

1:1 This policy statement has been prepared by the Lindsey Marsh Drainage Board to provide a public statement of the Board's approach to its management of flood risk and water levels in its area.

### Background

1:2 The Department for Environment, Food and Rural Affairs (DEFRA) has policy responsibility for flood and coastal defence in England. However, delivery is the responsibility of a number of flood and coastal defence 'operating authorities' which include the Lindsey Marsh Drainage Board. The Board maintained infrastructure is shown in paragraph 3.2 below.

1:3 The Government has published a policy aim and three objectives for flood and coastal defence (1). To ensure a more certain delivery of the aim and objectives by the individual operating authorities the Government has published a series of high level targets (2). The first target requires each operating authority to publish a policy statement setting out its plans for delivering the Government's policy aim and objectives in its area. This will include an assessment of the risk of flooding in its area, and what plans it has to reduce that risk.

1:4 This policy fulfils this requirement. A copy of this policy has been forwarded to DEFRA, the Department of the Environment, Transport and Regions, the Environment Agency (Anglian Region) the County Council and the two District Councils in which the Board's district is located. Copies are available from the Board's office, Wellington House, Manby Park, Manby, Louth, Lincolnshire, LN11 8UU. Telephone 01507 328095 or facsimile 01507 328097.

## 2. HOW THE BOARD WILL DELIVER THE GOVERNMENT'S POLICY AIM AND OBJECTIVES

2:1 The Lindsey Marsh Drainage Board supports the Government's aim and objectives for flood and coastal defence. The Board's policy will be consistent with them.

### **Policy Aim**

**To reduce the risk to people and the developed and natural environment from flooding by encouraging the provision of technically, environmentally and economically sound and sustainable defence measures.**

Section 3 below sets out the Board's plans for reducing or managing the flood risk in the Board's district.

### **Objective (a)**

**To encourage the provision of adequate and cost effective flood warning systems.**

The Board will assist the Environment Agency (Anglian Region) wherever possible in its provision of adequate and cost effective flood warning systems, integrating with the Agency in response to flood emergencies and participating as necessary in exercises to develop and test emergency response procedures.

#### **Objective (b)**

##### **To encourage the provision of adequate, economically, technically and environmentally sound and sustainable flood defences.**

In meeting its obligations the Board will consider its activities within the wider natural and developed environment seeking to ensure the avoidance of any adverse impact. It will equally co-operate with other drainage authorities and organisations to ensure adverse impacts on the drainage district do not arise as a result of other activities.

The Board will carry out its maintenance and improvement works in an efficient and cost effective way and where appropriate use best practice and techniques wherever possible.

To achieve this the Board will encourage the provision of adequate, economically, technically and environmentally sound and sustainable flood protection and water level management measures and seek to control that development which could increase the risk of flooding.

Within the drainage district a significant part of the area is at some risk of flooding and the Board will seek to retain this risk at acceptable levels through appropriate improvements and a sound maintenance strategy. The Board will also seek to ensure that the Environment Agency maintains at a satisfactory standard any flood defences which also afford protection to the district.

#### **Objective (c)**

##### **To discourage inappropriate development in areas at risk from flooding.**

The potential impact on flood risk through future development in the drainage district, or in the wider catchment drainage to the district, is fully recognised by the Board and it will take an active role in the assessment of structure plans, local plans and individual planning applications to ensure flood risk is not increased. Where appropriate the Board will secure from developers, and other direct beneficiaries, contributions to cover the cost of both immediate and longer term works necessary to ensure that any potential increase in flood risk is removed.

### **3. FLOODING RISKS IN THE BOARD'S AREA**

3:1 As mentioned in Section 2, a significant part of the Board's district is at some risk of flooding. However, that risk is substantially controlled although varying standards of protection apply. The following are the key details of the district:-

Catchment area draining to and within the district	86,550 ha
Total area of the district	50,600 ha
Area of agricultural land	41,871 ha
Other land including property, highways, etc.	8,729 ha
Sites of designated environmental interest	
Local nature reserves	1
SSSI	8
SPA	3
SAC	2
RAMSAR	2

### 3:2 Board Maintained Infrastructure

Pumping Stations	30
Other water level control structures	10
Watercourses	973,955 metres
Strategic Ordinary Watercourses	66,631 metres

Passing through, within or adjacent to the district are the following assets maintained by the Environment Agency:-

Main rivers	177,691 metres
River flood defences	172,279 metres
Sea and tidal defences	28,450 metres

### 3:3 Regulation of Activities

The Board will exercise as required its powers under the Land Drainage Act 1991 and its Byelaws to ensure that activities in and alongside the drainage system do not reduce flood protection standards and unnecessarily increase flood risk.

### 3:4 Standard of Protection

Through the operation and maintenance of its pumping stations and drainage systems the Board aims to maintain a general standard of protection capable which prevents damage to properties more often than once in 75 years (1.33% probability) and provides a 600mm freeboard to agricultural land in a one in ten year event (10% probability). The Board will aim to provide a higher standard of protection, in general 1 in 100 years where there are urban areas or critical infrastructure and it is justifiable in accordance with flood risk management principles.

### 3:5 Management of Flood Risks

The Board monitors the condition of its pumping stations and watercourses, particularly those designated as Strategic Ordinary Watercourses, from which overflowing or backing up of water could affect property. A continuous asset maintenance programme ensures that the Board's assets are kept in optimum condition to protect the social, economic and environmental welfare of the area. Where standards of protection are less than stated in 3:4 above, improvement works will be considered but only undertaken where the value is greater than the cost of work, solutions are sustainable and resources available. Work will be prioritised to maximise the benefits delivered. Higher standards of protection will be considered where the additional benefits are greater than the additional cost to realise them.

### 3:6 Publicity

The Board will seek to promote the need for works in its district and create a rational understanding among people who live and work in it as to what the flood risk is and the efforts made to control it. The Board will also seek to achieve directly and through local councils a culture within which the drainage systems are seen as vital to controlling flood risk, whilst providing an interesting aquatic habit and to dissuade abuse of them through the dumping of waste or the obstructing of flows in other ways.

The Board will publish and place on deposit at its offices, notices of its proposed annual programme of capital and maintenance works as follows:-

- |                  |  |
|------------------|--|
| January/February | - Capital works.   |
|                  | - Programme of works for the following spring, summer and autumn vegetation control. |

July/August

- Programme of works for the following winter and spring watercourse reforming and silt removal.

## **4. ENVIRONMENTAL MEASURES**

4:1 The Lindsey Marsh Drainage Board has nature conservation duties under the Land Drainage Acts 1991 and 1994, the Wildlife and Countryside Act 1981 and as a competent authority under the Conservation (Natural Habitats) Regulation 1994. The Board will fulfil these in a positive way.

Much of the Board's watercourse maintenance work of vegetation control and de-silting is a vital and routine requirement. Whilst inevitably some short term impact will arise, this management also maintains the diverse aquatic habitat in the district. The Board maintains a significant proportion of the total watercourse length in the district, the remainder being the responsibility of the Environment Agency and riparian landowners.

When carrying out works, be it maintenance or improvement, and consistent with the need to maintain satisfactory flood protection standards, the Board will aim to:

- avoid any unnecessary or long term damage to the natural habitat
- take appropriate opportunities to enhance habitats
- monitor the effect of any changes made

The Board will play its full role in sustaining the water level plans prepared for SSSI and, in conjunction with English Nature and other interested parties, review the plans in accordance with DEFRA guidance.

## **5. REVIEW OF POLICY STATEMENT**

5:1 The Lindsey Marsh Drainage Board will review this policy statement within a period not extending beyond five years.
